Cypionate vs. Sustanon. Thread starter Wellcraft18; Start Date Sep 21, 2018; W. Wellcraft18 New Member. Jul 12, 2018 2 0. Sep 21, 2018 #1 . Hey everyone, new to this site. I was on cypionate 600 mg a week for 4 months and took a 6 month break. Saw some gains probably about 20 pounds of muscle with increased caloric intake and clean eating ... A single ester test is always the choice to take. Sustanon does not give you as stable blood level as would a single ester test. IMHO I would always choose the single ester...so go with cypionate. Thanked in. 1,900 Posts. Rep Points. 2147483647. I just started using Sustanon 300 (UncleZ line), I am pinning 450mg twice weekly combined with 400mg of Deca and 200mg of Cypionate weekly. so each shot (twice per week) is: 450mg Sust. 200mg Deca. 100mg Cyp. Sustanon or cypionate, wich one is a better test and why in your opinion? Ihave used Sustanon in the

past and i am going to start new cycle next week and i was wondering if i should try cypionate this time. I had good results with sustanon but everything i read people are bashing sustanon! If you have tried both and have solid advice i would ... <https://files.journoportfolio.com/users/167924/uploads/a4796366-9ed3-4607-b8f6-326e5d91ae86.pdf> Sustanon 250 is a blend of different testosterone esters, however it is still essentially testosterone; like cypionate or enanthate. Therefore, in terms of muscle gains it does not matter what form of testosterone you use, as it is the same compound and thus will produce the an identical end-result.

Sust is 4 different test esters, including cyponate. Please check the percentage independently, but the number that pops in my head is that 30% of Sust is cyponate (do NOT bank on that number). I've seen a lot of people say to split Sust injections more than 1x per week, but cyponate is just fine 1x week (9 day half-life). Sustanon has some fast esters in it but it's primarily long esterated forms of testosterone. Test cyp, test e and sustanon can all be injected just once per week. I personally would pick test e/cyp over sustanon because the test prop in sustanon cause give some people some PIP. While Testosterone Cypionate is considered the gold standard for TRT in the United States, Sustanon 250 is more commonly used in many other countries, including Europe and Australia. Sustanon 250 - How to make the most of your TRT dose Depends on what you want. Sust is nice because it contains some faster acting esthers which means a built in front-back load...which is nice and easy to run, but the amounts of the prop in Sust is kinda small. Which is why I like Test E or Cyp, both are pretty much the same thing. <https://sway.office.com/bY6wHqabqb2yrExD>
