Zitzmann M, Saad F, Kliesch S. Long-term treatment with testosterone undecanoate injections leads to sustained weight loss and improvement of metabolic syndrome parameters in 381 hypogonadal men. J Sex Med 2014; 11 Suppl. 1 :7 [ Google Scholar ]

Testosterone undecanoate is a relatively recent injectable long-actioning testosterone, and, in countries where it is commercialized, the recommended dose is intramuscular 1000 mg, followed by 1000 mg at week 6, and 1000 mg every 10 to 14 weeks.. One explication for the improvement of metabolic control and weight loss in testosterone therapy.

All men received long-acting injections of testosterone undecanoate in 3-monthly intervals. Results: In all three classes of obesity, T therapy produced significant WL, decrease in waist circumference (WC) and body mass index (BMI). In patients with class I obesity, mean weight decreased from  $102.6 \pm 6.4$  to  $84.1 \pm 4.9$  kg, change from baseline. [look at this web-site](#)

Lowered testosterone in male obesity: mechanisms, morbidity and management. Ng Tang Fui M, Dupuis P, Grossmann M. Asian journal of andrology. 2014;16(2):223-231. Testosterone and weight loss: the evidence. Traish AM. Current opinion in endocrinology, diabetes, and obesity. 2014;21(5):313-322.

Testosterone as potential effective therapy in treatment of obesity in men with testosterone.

Testosterone undecanoate helps you overcome low T symptoms such as low energy, lack of focus, poor sleep, weight gain, depression, loss of libido, and many more. Testosterone Undecanoate is the best medication to treat men suffering from low testosterone.

Introduction: Injectable testosterone undecanoate (TU) is a long-acting testosterone (T) formulation available for the treatment of male hypogonadism (HG) since 2003. Areas covered: The efficacy and safety of injectable TU are assessed, as obtained by meta-analyzing available evidence. An extensive Medline, Embase and Cochrane search was performed. Another study found that weight loss for men taking testosterone undecanoate was more pronounced on the obese. Results showed that more than half of the men (53%) lost at least 33 lbs & almost a third lost 44 lbs or more.
