Human Chorionic Gonadotrophin - this is the full name of this medicine or abbreviated HCG Pregnyl 1500IU - is not an anabolic steroid. More precisely, it is a protein hormone that is formed in the placenta (uterus) of pregnant women. HCG Pregnyl 1500IU is formed in the female body in the first 6-8 weeks of pregnancy and makes possible the subsequent production of estrogen and gestagen in the. Only physicians experienced in infertility treatment should prescribe PREGNYL. Anaphylaxis has been reported with urinary-derived hCG products. The principal serious adverse reactions associated with PREGNYL are (1) ovarian hyperstimulation, a syndrome of sudden ovarian enlargement, ascites with or without pain, and/or pleural effusion, (2).

Pregnyl 5000IU is an injectable drug manufactured by MSD and containing as active substance Human Chorionic Gonadotropin (hCG). This is a hormone produced during pregnancy that is made by the developing placenta after conception, and later by the placental component syncytiotrophoblast. EC21 is the largest global B2B marketplace. Global pregnyl hcg buyers find suppliers here every day. If you are a manufacturer or supplier who want more international buyers, join EC21 for free now, and get your products listed here.

When cortisol is out of control because of a deficiency of testosterone in the system, it can destroy new muscle formations quickly. The typical course for treatment is the injection of 1500 I.U. to 3000 I.U. once every 4 to 5 days. This treatment should last a maximum of 2 to 3 weeks. HCG often is used in combination with Nolvadex, Clomid or. [read](#)
