

Turning White Sand Black!!

2/20/2017

I think it's safe to say we've heard from so many astounding speakers during our 2017 Winter "Plot" Tour. While we spent the winter "plotting" and planning, it's now time to put in action what we've learned.

When one speaker starts out saying, "We could fertilize our fields with y'all's soil. The ground I farm starts out as pretty much white beach sand."

There's obviously much we can be implementing. Especially when that white beach sand turns black due to a program that includes some of our [Residue®](#) and [SP-1™](#).

At our Princeton Seminar, Josh Boan (pictured) explained how a strong biological nutrient package helped him achieve improved soil health in his perennial peanut operation in north Florida.

Our friend, Jerry Carlson of Renewable Farming LLC, has the [rest of the story here](#).

Missed Josh at our Princeton Seminar? Listen to his presentation [here](#).
