

## ***Introducing Klear***

6/4/2018

The unique benefits of fish in biological and organic fertility programs have been recognized for years. Fish provides nitrogen, phosphorus, other nutrients, and amino acids to feed the growing plant and especially the soil microbes. It's hard to beat fish fertilizer when farming biologically!

For some applications, fish can be challenging due to its odor and its "stickiness" because of the oil content. The oil especially causes issues with drip tapes, micro tubing, fine mesh screens, and small spray tips.

**Introducing our new fish formulation ... Klear ...** with a 1-2-2 analysis.

Klear is a **reduced**-odor fish product which has been successfully used in drip tapes. One cooperating grower was not only thrilled that we'd solved the odor and clogging problems, but he was thrilled about the record-breaking blooms on his strawberry plants!

Check out the difference. The photo shows the choice is Klear!

Get all the benefits of fish even if your fertility program requires applications prone

to clogging (drip tapes, small spray tips, etc.). Call your AgriEnergy Resources representative today; or call our main office to be referred to a local rep. **815.872.1190**. Let us tell you about **Klear!**
