

## ***Organic Farming Resources***

*12/13/2018*

You made the big decision to transition to Organic Farming; maybe 20 years ago, maybe 20 days ago. And there are some obvious challenges you've either already overcome or are just learning to handle:

- Weed control
- Disease control
- Insect control
- Paperwork
- Marketing

**AgriEnergy Resources** has lots of ideas and **products** to help you with fertility, tillage, cover crops, crop rotations and organic pesticide concerns. But, we don't buy certified organic crops. So how are you going to get the value-added premium you deserve for them? You can:

- Feed your organic grains and forages to your own livestock
- Sell your organic grains and forages to other farmers with livestock
- Sell your organic grains to an organic livestock feed mill
- Sell your organic grains and produce to an organic food processor

A quick flip through the November/December 2018 issue of ***The Organic & Non-GMO Report*** showed ads from 25-ish organic grain buyers from California to Montana to Vermont and lots of points in between. Oh yeah, and some from Canada and Australia. So the opportunities are definitely out there. Hop on the internet and google "organic buyers near me". Or, click [here](#) and [here](#).

Happy growing and happy selling!!
