

Now's The Time for Plant Tissue Testing

6/4/2015

Midwest Laboratories, of Omaha, Nebraska, have been receiving numerous plant tissue samples each day. Over the last 20+ years we've been working with them, this is nothing new. It always seems to get real busy in June as farmers seek to improve nutrient uptake into their plants. [See what Midwest Labs says about plant tissue testing here.](#)

If you're one of these farmers and need assistance with your plant tissue analysis, here is a [guide published by Midwest Laboratories](#) on taking a representative sample. Once you get a solid sample, you can fill out a [plant sample submittal form](#) on our website and send it to Midwest Laboratories, Inc., 13611 B Street, Omaha, NE 68144.

A plant analysis that tests for nitrogen, sulfur, phosphorus, potassium, calcium, magnesium, sodium, iron, manganese, copper, boron, and zinc costs \$22.

If you choose to go through us, we can help you analyze the results and come up with a side-dress blend, a foliar-feed program, or come up with an improved fertility plan to meet your specific needs in 2016.
