

# ATOM, MOLECULES & IONS

## Chapter 2

IMRAN SYAKIR BIN MOHAMAD | MOHD HAIZAL BIN MOHD HUSIN  
FACULTY OF MECHANICAL TECHNOLOGY AND ENGINEERING

# THE ATOM

- Atom is the basic unit of an element, made up of even smaller particles called subatomic particles.
- There are three fundamental components (subatomic particles) that are important in chemistry: Electron, Proton and Neutron.
- The protons and neutrons of an atom are packed in an extremely small nucleus.
- Electrons are shown as 'clouds' around the nucleus.

# The Structure of the Atom

Figure above shows the location of the protons, Neutrons and electrons in an atom

# SUBATOMIC PARTICLES

| Particle           | Mass (g)               | Charge (Coulombs)      | Charge (units) |
|--------------------|------------------------|------------------------|----------------|
| Electron ( $e^-$ ) | $9.1 \times 10^{-28}$  | $-1.6 \times 10^{-19}$ | -1             |
| Proton ( $p^+$ )   | $1.67 \times 10^{-24}$ | $+1.6 \times 10^{-19}$ | +1             |
| Neutron (n)        | $1.67 \times 10^{-24}$ | 0                      | 0              |

**mass p = mass n = 1840 x mass  $e^-$**

# Atomic Number, Mass Number & Isotopes

**Atomic number** ( $Z$ ) = number of protons in nucleus

**Mass number** ( $A$ ) = number of protons + number of neutrons  
= atomic number ( $Z$ ) + number of neutrons

**Isotopes** are atoms of the same element ( $X$ ) with different numbers of neutrons in their nuclei

# Do You Understand Isotopes?

How many protons, neutrons, and electrons are in  $^{14}_6\text{C}$ ?

How many protons, neutrons, and electrons are in  $^{11}_6\text{C}$ ?

# Modern Periodic Table

The image shows a 3D-style periodic table with color-coded blocks: green for metals, brown for metalloids, and blue for nonmetals. Annotations include yellow boxes and arrows pointing to specific groups and elements. A yellow box labeled 'Alkali Metal' points to Group 1 (Li, Na, K, Rb, Cs, Fr). A yellow box labeled 'Alkali Earth Metal' points to Group 2 (Be, Mg, Ca, Sr, Ba, Ra). A yellow box labeled 'Period' points to the second row (Li to Ne). A yellow box labeled 'Group' points to Group 14 (C, Si, Ge, Sn, Pb). A yellow box labeled 'Halogen' points to Group 17 (F, Cl, Br, I, At). A yellow box labeled 'Noble Gas' points to Group 18 (He, Ne, Ar, Kr, Xe, Rn). The table includes element symbols and atomic numbers, with some elements in parentheses representing synthetic elements.

# Chemistry In Action

Natural abundance of elements in Earth's crust

Natural abundance of elements in human body

## Molecules & Ions

A **molecule** is an aggregate of two or more atoms in a definite arrangement held together by chemical bonds

A **diatomic molecule** contains only two atoms

A **polyatomic molecule** contains more than two atoms

An **ion** is an atom, or group of atoms, that has a net positive or negative charge.

**cation** – ion with a positive charge

If a neutral atom **loses** one or more electrons it becomes a cation.

11 protons  
11 electrons

11 protons  
10 electrons

**anion** – ion with a negative charge

If a neutral atom **gains** one or more electrons it becomes an anion.

17 protons  
17 electrons

17 protons  
18 electrons

A ***monatomic ion*** contains only one atom

A ***polyatomic ion*** contains more than one atom

# Do You Understand Ions?

How many protons and electrons are in  ${}_{13}^{27}\text{Al}^{3+}$  ?

How many protons and electrons are in  ${}_{34}^{78}\text{Se}^{2-}$  ?

# Chemical Formulas

## Standard Types of Formulas and Models

|                      | Hydrogen  | Water  | Ammonia   | Methane   |
|----------------------|---|--|---|---|
| Molecular formula    | $H_2$   | $H_2O$   | $NH_3$  | $CH_4$  |
| Structural formula   | $H-H$   | $H-O-H$  | $\begin{array}{c} H-N-H \\   \\ H \end{array}$  | $\begin{array}{c} H \\   \\ H-C-H \\   \\ H \end{array}$                              |
| Ball-and-stick model |   |   |   |   |
| Space-filling model  |  |  |  |  |

A ***molecular formula*** shows the exact number of atoms of each element in the smallest unit of a substance

An ***empirical formula*** shows the simplest whole-number ratio of the atoms in a substance

**molecular**

**empirical**

***ionic compounds*** consist of a combination of cations and anions

- the formula is always the same as the empirical formula
- the sum of the charges on the cation(s) and anion(s) in each formula unit must equal zero

## The ionic compound NaCl

# Formula of Ionic Compounds

## Names and Formulas of Some Common Inorganic Cations and Anions

| Cation  | Anion  |
|---|--|
| Aluminum ( $\text{Al}^{3+}$ )                   | Bromide ( $\text{Br}^-$ )                              |
| Ammonium ( $\text{NH}_4^+$ )                    | Carbonate ( $\text{CO}_3^{2-}$ )                       |
| Barium ( $\text{Ba}^{2+}$ )                     | Chlorate ( $\text{ClO}_3^-$ )                          |
| Cadmium ( $\text{Cd}^{2+}$ )                    | Chloride ( $\text{Cl}^-$ )                             |
| Calcium ( $\text{Ca}^{2+}$ )                    | Chromate ( $\text{CrO}_4^{2-}$ )                       |
| Cesium ( $\text{Cs}^+$ )                        | Cyanide ( $\text{CN}^-$ )                              |
| Chromium(III) or chromic ( $\text{Cr}^{3+}$ )   | Dichromate ( $\text{Cr}_2\text{O}_7^{2-}$ )            |
| Cobalt(II) or cobaltous ( $\text{Co}^{2+}$ )    | Dihydrogen phosphate ( $\text{H}_2\text{PO}_4^-$ )     |
| Copper(I) or cuprous ( $\text{Cu}^+$ )          | Fluoride ( $\text{F}^-$ )                              |
| Copper(II) or cupric ( $\text{Cu}^{2+}$ )       | Hydride ( $\text{H}^-$ )                               |
| Hydrogen ( $\text{H}^+$ )                       | Hydrogen carbonate or bicarbonate ( $\text{HCO}_3^-$ ) |
| Iron(II) or ferrous ( $\text{Fe}^{2+}$ )        | Hydrogen phosphate ( $\text{HPO}_4^{2-}$ )             |
| Iron(III) or ferric ( $\text{Fe}^{3+}$ )        | Hydrogen sulfate or bisulfate ( $\text{HSO}_4^-$ )     |
| Lead(II) or plumbous ( $\text{Pb}^{2+}$ )       | Hydroxide ( $\text{OH}^-$ )                            |
| Lithium ( $\text{Li}^+$ )                       | Iodide ( $\text{I}^-$ )                                |
| Magnesium ( $\text{Mg}^{2+}$ )                  | Nitrate ( $\text{NO}_3^-$ )                            |
| Manganese(II) or manganous ( $\text{Mn}^{2+}$ ) | Nitride ( $\text{N}^{3-}$ )                            |
| Mercury(I) or mercurous ( $\text{Hg}_2^{2+}$ )* | Nitrite ( $\text{NO}_2^-$ )                            |
| Mercury(II) or mercuric ( $\text{Hg}^{2+}$ )    | Oxide ( $\text{O}^{2-}$ )                              |
| Potassium ( $\text{K}^+$ )                      | Permanganate ( $\text{MnO}_4^-$ )                      |
| Silver ( $\text{Ag}^+$ )                        | Peroxide ( $\text{O}_2^{2-}$ )                         |

# NAMING COMPOUND

- **Ionic Compounds**

- often a metal + nonmetal
- anion (nonmetal), add “ide” to element name

- Transition metal ionic compounds
  - indicate charge on metal with Roman numerals

# Molecular compounds

- nonmetals or nonmetals + metalloids
- common names
  - $\text{H}_2\text{O}$ ,  $\text{NH}_3$ ,  $\text{CH}_4$ ,  $\text{C}_{60}$
- element further left in periodic table is 1<sup>st</sup>
  - $\text{NF}_3$ ,  $\text{NO}_2$
- element closest to bottom of group is 1<sup>st</sup>
  - $\text{SO}_2$
- if more than one compound can be formed from the same elements, use prefixes to indicate number of each kind of atom
- last element ends in ide

## Greek Prefixes Used in Naming Molecular Compounds

| Prefix | Meaning |
|--------|---------|
| Mono-  | 1       |
| Di-    | 2       |
| Tri-   | 3       |
| Tetra- | 4       |
| Penta- | 5       |
| Hexa-  | 6       |
| Hepta- | 7       |
| Octa-  | 8       |
| Nona-  | 9       |
| Deca-  | 10      |

# Molecular Compounds

**HI**

**NF<sub>3</sub>**

**SO<sub>2</sub>**

**N<sub>2</sub>Cl<sub>4</sub>**

**NO<sub>2</sub>**

**N<sub>2</sub>O**

# Acid & Bases

An **acid** can be defined as a substance that yields hydrogen ions ( $H^+$ ) when dissolved in water.

HCl

- Pure substance, hydrogen chloride
- Dissolved in water ( $H^+ Cl^-$ ), hydrochloric acid

An **oxoacid** is an acid that contains hydrogen, oxygen, and another element.

nitric acid

carbonic acid

sulfuric acid

## Some Simple Acids

| <b>Anion</b>       | <b>Corresponding Acid</b>   |
|--------------------|-----------------------------|
| $F^-$ (fluoride)   | HF (hydrofluoric acid)      |
| $Cl^-$ (chloride)  | HCl (hydrochloric acid)     |
| $Br^-$ (bromide)   | HBr (hydrobromic acid)      |
| $I^-$ (iodide)     | HI (hydroiodic acid)        |
| $CN^-$ (cyanide)   | HCN (hydrocyanic acid)      |
| $S^{2-}$ (sulfide) | $H_2S$ (hydrosulfuric acid) |

# Naming Oxoacids and Oxoanions

## Names of Oxoacids and Oxoanions That Contain Chlorine

### Acid

### Anion

$\text{HClO}_4$  (perchloric acid)

$\text{ClO}_4^-$  (perchlorate)

$\text{HClO}_3$  (chloric acid)

$\text{ClO}_3^-$  (chlorate)

$\text{HClO}_2$  (chlorous acid)

$\text{ClO}_2^-$  (chlorite)

$\text{HClO}$  (hypochlorous acid)

$\text{ClO}^-$  (hypochlorite)

A **base** can be defined as a substance that yields hydroxide ions ( $\text{OH}^-$ ) when dissolved in water.

sodium hydroxide

potassium hydroxide

barium hydroxide

## Common and Systematic Names of Some Compounds

| <b>Formula</b>                                       | <b>Common Name</b>       | <b>Systematic Name</b>         |
|--|--------------------------|--------------------------------|
| H <sub>2</sub> O                                     | Water                    | Dihydrogen monoxide            |
| NH <sub>3</sub>                                      | Ammonia                  | Trihydrogen nitride            |
| CO <sub>2</sub>                                      | Dry ice                  | Solid carbon dioxide           |
| NaCl   | Table salt               | Sodium chloride                |
| N <sub>2</sub> O                                     | Laughing gas             | Dinitrogen monoxide            |
| CaCO <sub>3</sub>                                    | Marble, chalk, limestone | Calcium carbonate              |
| CaO  | Quicklime                | Calcium oxide                  |
| Ca(OH) <sub>2</sub>                                  | Slaked lime              | Calcium hydroxide              |
| NaHCO <sub>3</sub>                                   | Baking soda              | Sodium hydrogen carbonate      |
| Na <sub>2</sub> CO <sub>3</sub> · 10H <sub>2</sub> O | Washing soda             | Sodium carbonate decahydrate   |
| MgSO <sub>4</sub> · 7H <sub>2</sub> O                | Epsom salt               | Magnesium sulfate heptahydrate |
| Mg(OH) <sub>2</sub>                                  | Milk of magnesia         | Magnesium hydroxide            |
| CaSO <sub>4</sub> · 2H <sub>2</sub> O                | Gypsum                   | Calcium sulfate dihydrate      |
