Future world should be based on a society wherein - individuality & uniqueness is preserved - \Rightarrow all groups shall not tolerate but even respect & admire the next groups & differences by understanding them & seeing him for what he is

They shall be like the 7 different colors of the spectrum ~~The individuality~~ different - but yet capable of combining together like in white light to achieve a common end.

Natures hint to harmony & light

Everybody wants freedom. When ignorant we are still slaves at the wind, time, energy etc. By gaining wisdom & knowledge we drive back these barriers and come out into the light that is true freedom..

make three dimensional films of big bands + Broadway acts & rent to schools & colleges for social event

being - change the electrons of this molecules into electrical impulses - transmit these impulses to a distant planets or continents where they ~~are~~ these impulses select ready chemicals to recompose the human again

1 mole of man = 60 yrs

$\frac{1}{2}$ mole of man = 15 yrs

Take half a mole of man
recompose - give him physical
youth - but retain mental
maturity -

→ something like radio transmitter
of pictures

Get heart lung, testicles - glands
of youth & replace in old
body to rejuvenate it

Body after a 100 yrs shows signs
of rejuvenation
teeth, hair, clearer vision etc

Make a huge model of the
human body - for people
to travel through & see.

Man thinks fleetingly rapidly.
His imagination is vivid - it is far
in excess to the ~~capa~~ skill of a
painter, Brust or cameraman or writer
document or motion picture set &
situation - These material
~~material~~ ^{representations} are the product of
one's ~~own~~ mental vision & the
~~level~~ of greatness of an individual
work is proportional to his
ability to transfer these
mental visions to the ~~ac~~ rational
New Image Address of ability,
can be ever achieve 100% justice
to his mental ~~the~~ vision - for
usually the superior representation
find their source in individuals
who have proportionally superior
mental visions - It's like climbing
a flight of stairs with a bricklayer
adding another step at the top.
It (over)

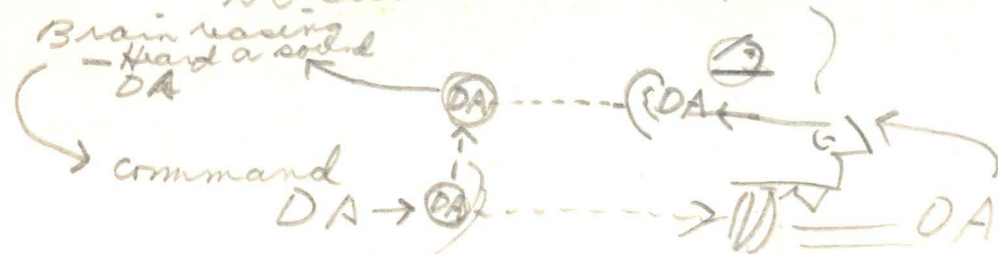

Think of the thousands upon thousands of beautiful visions, thoughts, musical & melodies, scientific theories that has been lost to the winds because never did anyone have the ability to record them in their full - or never cared to record them at all.

Think of how much progress & originality & production variety would result if one could by scientific means record in full these mental visions. The HMHT Foundation Moving Image Archive (chapter exhibit World's fair) exists a ~~most~~ sensitive machine that is capable of recording the slightest electrical brain impulses - If this could be developed along the lines of a combined telephone electric picture transfer, & chemical selector capable of selecting odors & colors - ~~these~~

If mental sound is heard from inside the inner ear canal & if ^{mental} visions are recorded on the retina or in the optic nerve receptor - if these electrical impulses could be tapped & transferred to the machine - such a rational representation & recording of the flighty mental vision would be possible.

3 dimensional representations might be achieved by tapping the view of each individually - making negative of each & projecting them on a film (chapter exhibit World's fair)

Mental might originate in vocal chord dispenser

(in mental sound might go directly)

We who decry the govt are in effect actually proclaiming the paradox of our democracy. For the ~~govt~~ ~~is more other~~ the democratic govt is more other than us the people. Only a fool would decry himself. There fore one who decrys doesn't consider himself decrying himself but rather a separate unit the govt. ~~he~~ ~~shows~~ that he is not aware of the fact that he is the Govt. ~~he~~ ~~is~~ ~~unaware~~ of the responsibilities of a democratic system. & on the other hand you are aware that you are the govt but you proceed to decry & squelch the Govt. you are in effect that the will of the people is not the ~~the~~ best

Get this straight - a govt is a means whereby things can be accomplished for the benefit of the people it dwells amongst. Especially where the govt directly is the people should that govt work for the betterment of themselves the people. If a govt. does not do this it is not a govt. but an anarchy - & that it is run by a people too ignorant to run it right therefore underserving of good governmental action.

We must not segregate the situation as the people - the govt - Big Business & The Govt. They are all one! the people is the govt - Big Business is the govt - We should not ~~diver~~ split but coagulate & learn & exercise the democratic

that are ours ~~so~~ so as to
run ourselves for the betterment
of our selves.

1. Must have absolute confidence
& faith in intelligence of the
common man.

Democracy can enhance
it's own safety ~~or~~ by
raising ~~the~~ the intellig.
intellect of the people it
is run by. Only a
Govt (~~that~~) that really
is based on good ~~and~~
stand ~~the~~ would take
the chance of being ~~dis~~
judged by a well informed
people. A Govt that is
cognizant of it's own
evils must dwell upon
the ignorance of it's people.
& is afraid to be put on
the auction block with other
forms of Govt to be judged
& selected by a well informed
people.

2. Once we have an intelligent
citizen we must make him
aware of the fact that he is
a citizen - moves through a
wholesale govt. advertising
campaign - utilizing the
radio, the movies, pamphlets
the school etc - bill boards - the
rise a thing which has never
been done - but if done
would greatly phase the citizen
greatly improve the Govt.

3. Once he is aware that he is
a citizen definite materials
channels should be set up
whereby he can conveniently
act as a vitally concerned
citizen -

1. No Poll taxes.
2. a Public notice in all
newspapers - stating
all bills being proposed
3. a Govt newspaper.

Print good letters to injecting spirit of a ~~common~~ clarify a common objective for all ~~of~~ ~~the~~ ~~govt.~~ ~~workers~~ -
Stories of govt. workers -
Bureaucracy

formal record
also all cases at Supreme Court

4. Take movies of a sessions of Congress - & distribute to all ~~cinema~~ theaters & schools requesting them. This Congressman who shall always be in the eyes of the people will really buck up & work - & if they can't, the people will know & will eventually remove him.

5. more referendums among the people - should be equally well informed about International Govt.

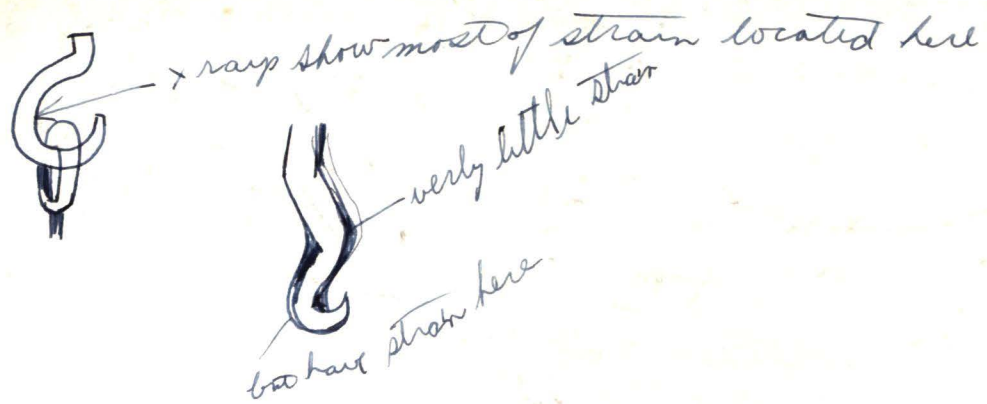

man is intelligent once informed & once ^{man} free to act - This world has nothing to fear - Democracy will ^{real} ^{live}!

Mechanical Drawing could be very simple taught by films

Things never to forget

1. If you have a car - pick up hitch-hikers - remember when you used to hitch home from kids - how it felt.
2. Always tip an extra dime 15¢ a quarter - especially to a caddy at golf - you got it with nervous tension - remember how you swore to save other kids from this inneluded chair - how unfair you thought it was to hang a line two or three yds well on the thread of a three to regents -
4. Stay young - smile - thirty two

~~The~~ True man is a dreamer
 an abstractionist artistic creator.
 This in itself seems contrary to
 one who is realistic, practical
 deliberate, but ~~we~~ in the
 course of time ^{not} have discovered
 that mastery ~~of~~ ^{to} full
 utilization of material provides
 an equitable bridge by
 which our inner creative
 desires can span the gap
 of vision to expression.

Therefore - dream - desire
 to create - stimulate this
 desire with knowledge but at
 the same time understand

the material things by which these
 dreams can be expressed. The
 more you understand the ~~variety~~
~~of uses~~ versatility of the material
 the more you will desire to create
 the more you will dream - the
 more you will create.

The artist needs his paints,

I had a wonderful revelation today
first I was bewitched by Prof
Mantham's experiments with the
stroboscope + then with a
little air propelled top that spun
at a terrific rate of 2-3,000
revolutions per second

This terrific rate of rotation
could be utilized in many ways
could develop an extremely high
voltage motor - could record
sounds beyond the scope of
the human ear - that slow down
down to be heard
